Command Center - Product Box

Command Center is the next evolution of our eCommerce Sales Management solution – purpose-built to help brands stay on track or outperform their sales goals by improving orchestration across sales, digital shelf, and media. By unifying data and metrics from ESM, DSA, and RMM into a single, goal-oriented platform, Command Center empowers teams to track KPIs, diagnose root causes of performance gaps, and take targeted action to close them. Brands upload their commercial goals, and Command Center provides a clear path to execution – through pacing dashboards, predictive analytics, and sales plan-prioritized recommendations. With expanded support for Walmart and Target, the platform now brings traditionally siloed insights into a unified view that supports smarter, faster decisions across Sales, Marketing, and Category teams.

Product Name: Command Center

Scope of Command Center

Command Center connects disparate retail data sources (POS, ePOS, retail media, digital shelf, internal goals) into an integrated commerce analytics and execution hub. It empowers cross-functional teams to:

- Instantly see how you're pacing to plan—both year-to-date and projected for the upcoming period—at a brand, category, and SKU level
- Understand why you're missing or overpacing with built-in root cause diagnostics that surface insights automatically
- Identify high-impact content fixes by detecting trending keywords your customers are searching and your competitors are using
- Proactively resolve availability issues with predictive, prioritized fixes tied to your sales plan

Currently available for Amazon in the US, Canada, UK, and Australia. Available for Walmart and Target in the US only.

Retailers / Geographies Supported

- Amazon: US, Canada, UK, Australia
- Walmart: US only
- Target: US only (End of Q3 ‘25)

Key Features

1. Pacing to Plan
    a. Description: Provides an instant view of how sales are pacing against plan—both period-to-date and forecasted for the remainder of the quarter—at a brand, category, and SKU level. Includes early warning signals for underperformance and a snapshot root cause explanation to enable timely, targeted interventions. Built-in alignment to internal sales plans and goal hierarchies ensures that all actions tie back to commercial objectives.

b. Benefit: Enables proactive course correction and executive visibility on performance risk.

2. Root Cause Analysis
a. Description: Instantly understand why you're missing plan with automated root cause analysis that pinpoints performance gaps across traffic, conversion, price, and availability. Teams can drill down across brand, category, and SKU to isolate drivers and take focused action.
b. Benefit: Eliminates manual analysis and accelerates time-to-action by surfacing root causes that matter most.

3. Media Gap Closure Recommendation
a. Description: Drives gap closure in two layers. First, it identifies how much of the sales gap can be closed through optimization of the existing media budget by reallocating spend away from low-performing SKUs toward those with higher incremental sales potential. This assumes keyword-level optimization has already occurred and focuses purely on SKU-level adjustments. Second, it estimates the additional media investment required—if any—to fully achieve the sales goal.
b. Benefit: Maximizes media efficiency and provides a clear, sales-aligned rationale for incremental investment when needed.

4. Content Compliance Gap Closure Recommendations
a. Description: Automated detection of content mismatches with PIM systems or retailer rules (title, image, description, attributes). Prioritizes fixes with the highest revenue potential based on sales plan objectives and the current gap to plan.
b. Benefit: Ensures teams prioritize content optimization efforts on SKUs with the greatest sales plan impact, avoiding wasted effort on low-relevance issues.

5. Content Efficacy Gap Closure Recommendations
a. Description: AI analyzes competitor listings, consumer trends, and semantic themes to suggest title and copy improvements. Measures impact on organic rank and conversion.
b. Benefit: Boosts organic traffic and conversion, reducing dependency on paid media.

6. Availability Gap Closure Recommendation
a. Description: Detects current or forecasted stockouts across retailers and connects them to sales impact. Provides SKU- and store-level signals to supply chain teams for replenishment.
b. Benefit: Reduces lost sales due to out-of-stock issues and supports online-to-offline performance alignment.

Appendix

What’s not included:

- Amazon Fresh/ 3P – currently not supported

- Automations (is part of base ESM (Amazon only) but nothing contained within the Command Center landing page). No automations at all for Walmart or Target.
- ESM Recommendations – nothing contained within command center land page
- RMM – metrics and insights only, no automations
- DSA – metrics and insights only, no automations
- PRA – no metrics or insightsFAQs

Retail Media Product Offering

CommerceIQ
Intelligent automation for profitable ecommerce growth

1. Retail Media Management Scope

CommerceIQ Retail Media Management enables brands to connect to advertising systems of over 100 retailers, manage and optimize their retail media spend within a single platform.

1.1 List of Retailers Supported

CommerceIQ Retail Media Management product includes coverage for performance reporting, campaign management workflows and advertising optimization automation for the Retailers and Countries set forth in **Section 1.1** (linked here). Access to a particular Retailer may be provided by CommerceIQ directly through its own systems or through a third party Ad Network service such as Criteo or Citrus and is subject to the cooperation by the Retailer and the third party service (as applicable). The list of retailers supported is subject to change at any time at CIQ discretion. **Any retailer not currently connected to CommerceIQ platform due to retailer limitations on third party API integrators** (e.g., Wayfair, The Home Depot etc.) **may be serviced via CommerceIQ's managed services offering.**

1.2 Ad Formats Availability by Retailer and Ad Platform

CommerceIQ Retail Media Management allows for management of a variety of Ad Formats. Please note that support for certain ad formats (e.g., Display) is contingent upon the retailer's self-service capabilities and the availability of their API integrations. **Any Ad Format not currently supported by CommerceIQ platform may be serviced via CommerceIQ's managed services offering.** Please see **Section 1.2** (linked here) for a list of Ad Formats supported by Retailer and / or Ad Network Platform. The list of ad formats availability is subject to change at any time at CIQ discretion.

1.3 Feature Availability by Retailer and Ad Platform

CommerceIQ Retail Media Management offers a comprehensive set of features; however, availability may differ across retailers due to inherent retailer constraints or CommerceIQ's own development priorities and timelines. Certain features may become available later based on retailer availability or as CommerceIQ's platform development progresses. Please see **Section 1.3** (linked here) for a list of features available by Retailer and / or Ad Network Platform. The list of feature availability is subject to change at any time at CIQ discretion.

1.4 Historical Data Availability

Please note that the availability of historical data is subject to retailer constraints. We have provided a detailed outline of the data history that can be made available in **Section 1.4** (linked here).

2. Detailed List of Product Features

2.1 Market Insights	**Applicable to Keyword Targeted Search Advertising Formats** **Description**: Share of Voice (SoV) Measurement – Provide data to allow you to better understand how your brands rank on top keywords compared to your competitors • Share of voice is defined as weighted average of placements a brand or group of products get on a select set of keywords on the first page of search results compared to competition • Track SoV of up to 200 keywords once a day; intra-day tracking (4X a day) for up to 50 top priority keywords • Keywords are auto classified into branded, generic and competitor type and SoV is tracked for these groups • Ability to track organic, paid and total share of voice • Ability to track Top 3, Top 5, Top 10 and Page 1 share of voice • Create custom groupings ("shelves") of priority keywords to be tracked • Dashboards to analyze SOV trends, gaps and opportunities

2.2 Campaign Management	**Applicable to Search Advertising Formats**
	
	Description: Campaign management allows advertisers to create, monitor and optimize search advertising campaigns. Users can take bulk actions such as create, pause, enable, bid or budget change for a group of campaigns / keywords / SKUs with a single click
	
	• Create campaigns with tailored ad groups, targets and SKUs (Available for Amazon. Walmart and Sam's Club only)
	• View performance data by campaigns, targets (or keywords), search terms and SKUs where available
	• Optimize campaigns by taking following bulk or individual actions. Campaign management action can vary by retailer because of retailer limitation and / or CommerceIQ's lack of support. Please see Section 1.5 (linked here) on full scope of actions available in campaign management by retailer and ad type
	  ○ Add keywords
	  ○ Make search term negative
	  ○ Change target (keyword) bids
	  ○ Change campaign or ad group budget
	  ○ Pause, enable or archive SKUs, keywords and campaigns
	  ○ Adjust SKU or campaign bids
	  ○ Change placement modifiers and bids
	• Apply expression filters (e.g. all keywords with iROAS <$2) and take targeted bulk actions
	• Conduct bulk search by pasting groups of campaigns, SKUs, keywords directly into search
	• Create custom filtered performance views based on your business categorization, metric thresholds
	• View detailed log of all automated and user driven actions taken each day for each campaign
	• Deep dive into each campaign to view and edit all campaign parameters

2.3 Incrementality	**Applicable to Search Advertising Formats** **Description**: CIQ's proprietary AI model that estimates true ROI of search media investment and optimizes spend to drive incremental sales (and not just ad attributed sales) for brands • Estimated at a keyword level and can be rolled up to campaigns or group of campaigns • Requires availability of Market Insights and retailer keyword level performance data in order to enable • Includes following metrics - ○ Incremental ROAS (iROAS): Measures true incremental ROI for given advertising spend

	○ Incremental Sales: Estimated incremental sales for given advertising spend • Incrementality measures are available in reporting, campaign management and campaign optimizer modules • Ability to write rule based strategies to increase Incremental ROAS in campaign optimizer. Set up rules to automatically increase bids on keywords with high incrementality while reducing bids on keywords driving low incrementality
2.4 Campaign Optimizer	**Applicable to Search Advertising Formats** **Description**: Create custom strategies to automate day-to-day campaign management tasks such as bid and budget changes. Following strategies can be deployed in campaign optimizer through a custom rule builder • Improve iROAS: Create rules to increase bids on keywords with iROAS exceeding user defined threshold and vice versa • Improve ROAS: Create rules to increase bids on keywords with ROAS exceeding user defined threshold and vice versa • Improve Share of Voice: Create rules to increase bids on keywords with share of voice below user defined threshold and vice versa • Inventory Aware Advertising - Create rules to automatically pause / un-pause SKUs depending on stock levels (Amazon and Walmart only) • Negative Keywords: Make keywords/search terms negative that have ad spend exceeding user defined threshold but zero or sales below user defined threshold • Budget Optimization: Reduce budgets on campaigns with performance (ROAS, iROAS, SOV etc) below user defined threshold and vice versa • Campaign optimizer action availability can vary by retailer because of retailer limitation and / or CommerceIQ's lack of support. Please see Section 1.6 (linked here) on full scope of automations available in campaign optimizer by retailer and ad type
2.5 Budget Optimizer	**Applicable to Search Advertising Formats** **Description**: Upload budget plan by user defined group of campaigns or profile and portfolio and automatically spend to plan using CIQ's AI driven optimizations • Ability to upload budget plan by month at a group of campaigns

	• Set up custom seasonality adjustments to allocate majority of budget within a month to specific events (e.g., spend 70% of budget during Prime Day) • Provides daily bid and budget recommendations to pace spend to budget plan while driving iROAS improvement • Provides two options for optimizations by toggling between automated actions or daily recommendations that can be manually approved or rejected • Provides dashboard to track spend to budget plan and surface over/underspend campaigns/group of campaigns
2.6 Hourly Bidder	**Applicable to Search Advertising Formats** **Description**: Set up custom rules to automatically adjust bids & budgets hourly or in specific time increments to maximize conversion and avoid early exhaustion of budgets • Bid Actions: Reduce bids at an hourly level or in specific time increments throughout the day • Budget Actions: Release budgets at an hourly level or in specific time increment throughout the day • Option to increase/decrease bids and budgets from the base value • Allows setting up strategies for the next 10 years. Time schedule by default is set to PST but can be changed to any time zone • Only one hourly bidder strategy is allowed per campaign
2.7 Actions Log	**Applicable to Search Advertising Formats on Amazon** **Description**: View of all automated and user driven campaign actions taken via the CIQ system • Detailed log of all campaign actions taken by campaign and budget optimizer at the most granular entity level (e.g., Campaign - Keyword), with ability to enter timeframes to help audit
2.8 Campaign Management (DSP)	**Applicable to DSP Advertising on Amazon** **Description**: DSP campaign management allows advertisers to monitor and optimize display advertising campaigns. Users can take bulk actions such as pause, enable or make bid / frequency cap change for a group of orders/ line items/ products with a single click. View all or custom filtered performance data and take actions across a single or a group of orders / line items with a single click

	• Following actions are available in the DSP campaign management
	  ○ Order level: Frequency cap
	  ○ Line Items level: Status, Base supply bid, Max supply bid, frequency cap, add inventory, remove inventory
	  ○ Audiences Level: Add or remove audience
	• Get recommendations to improve performance by changing base / max bids, updating supply sources, audiences, line items etc.
	• Track performance of orders, line items, audience, inventory and devices
	
	Requirements for Display Activation
	
	• Requires Retail Media Display product to be purchased separately
	• Availability is based on account type; the “Seat” should be “Brand Owned” or “CIQ Owned”
	• Display for all other retailers as well as offsite Display via The Trade Desk can be supported via CommerceIQ’s managed services offering

2.9 AMC Insights	**Full Funnel Search & Display Insights on Amazon**
	
	Description: Understand your customer’s shopping journey via integrated ad-attributed events across Sponsored Search and DSP
	
	• Measure which ad types are most effective at bringing shoppers into the funnel
	• Drive higher DSP ad spend efficiency - targeting based on shopping signals like multiple PDP visits, cart abandoners
	• Identify time of day with highest traffic & conversion and lowest CPCs
	• Create LTV-based audience segments for retargeting during tentpoles
	• Develop day parting strategies based on time of day performance metrics
	• Requires Retail Media Display product to be activated
	• Standard reports In-product dashboards available -
	  ○ **Exposure group overlap** - identify high performing customer cohorts based on exposure to various ad combinations
	  ○ **Full Funnel performance** - Deep dive into full funnel performance at various points of shopper journey as well as different attribution types (e.g., last touch vs. multi-touch)
	  ○ **Time of Day performance** - understand periods of the day with highest traffic, RoAS, conversions and lowest CPCs to build optimal day-parting strategies

	○ **Path to Purchase** - identify combination of ad formats that drive optimal path to purchase and conversion

2.10 Reporting	**Applicable to Search on ALL Retailers and DSP Advertising on Amazon**
	
	Description: Self-service option to create customizable recurring WBR, MBR, QBR reports to measure advertising performance for both Search and DSP advertising.
	
	• Standard CommerceIQ's best practice WBR, MBR and QBR report templates with pre-selected metrics and segments (e.g., by category, campaign type, targeting type etc.)
	  ○ Aggregated performance metrics (e.g., Ad Sales, Ad Spend RoAS, iRoAS, CPCs) by your internal business and category taxonomy, campaign type (e.g., SP, SB, SD), targeting type (Auto, Keyword, Category, Product) etc
	  ○ Budget pacing template to track spend against budget plan
	• Ability to create custom reports from scratch
	  ○ Visualizations supported - Line chart and Multi dimension table with ability to drill down and multi time period table
	  ○ Ability to clone, delete or edit any widget
	  ○ Ability to save a report and export widgets as csv file

2.11 Nexis	**Applicable to Search on Amazon and Walmart** **Description:** Generative AI based Teammate to quickly summarize and provide insights into advertising performance. • Leverages CommerceIQ's Ecommerce Context Engine to power insights, automatically highlighting outliers, handling root cause analysis and explaining the top drivers of performance • Automatically generate **powerpoint presentations**, with custom configured views, titles and GenAI-based Insights
2.12 Programmatic Data Sharing	**Applicable to Search Advertising Formats** **Description:** Frictionless data-sharing solution, enabling clients to pull their retail media performance data directly into their own data warehouses or data lakes via Databricks connectors. This capability allows for deeper analytics and custom reporting within a client's existing data infrastructure.

CommerceIQ
Intelligent automation for profitable ecommerce growth

1. Retail Media Management Scope

CommerceIQ Retail Media Management enables brands to connect to advertising systems of over 100 retailers, manage and optimize their retail media spend within a single platform.

1.1 List of Retailers Supported

CommerceIQ Retail Media Management includes coverage for performance reporting and advertising optimization automation for the Retailers and Countries set forth in **Section 1.1** (linked here). Access to a particular Retailer may be provided by CommerceIQ directly through its own systems or through a third party Ad Network service such as Criteo or Citrus and is subject to the cooperation by the Retailer and the third party service (as applicable). The list of retailers supported is subject to change at any time at CIQ discretion. **Any retailer not currently connected to CommerceIQ platform due to retailer limitations on third party API integrators** (e.g., Wayfair, The Home Depot etc.) **may be serviced via CommerceIQ's managed services offering.**

1.2 Ad Formats Availability by Retailer and Ad Platform

CommerceIQ Retail Media Management allows for management of a variety of Ad Formats. Please note that support for certain ad formats (e.g., Display) is contingent upon the retailer's self-service capabilities and the availability of their API integrations. **Any Ad Format not currently supported by CommerceIQ platform may be serviced via CommerceIQ's managed services offering.** Please see **Section 1.2** (linked here) for a list of Ad Formats supported by Retailer and / or Ad Network Platform. The list of ad formats availability is subject to change at any time at CIQ discretion.

1.3 Feature Availability by Retailer and Ad Platform

CommerceIQ Retail Media Management offers a comprehensive set of features; however, availability may differ across retailers due to inherent retailer constraints or CommerceIQ's own development priorities and timelines. Certain features may become available later based on retailer availability or as CommerceIQ's platform development progresses. Please see **Section 1.3** (linked here) for a list of features available by Retailer and / or Ad Network Platform. The list of feature availability is subject to change at any time at CIQ discretion.

1.4 Historical Data Availability

Please note that the availability of historical data is subject to retailer constraints. We have provided a detailed outline of the data history that can be made available in **Section 1.4** (linked here).

From Packaging & Pricing Project Update 4/28/25.

Note that the legacy system (Campaign Optimizer, Budget Optimizer and Hourly Bidder) will still be available for specific customers (e.g., DSP only customers or self-serve customers that purchase "core" RMM package), whereas the new Ally Goal Optimizer will replace these three items for other clients. More details in the linked update deck.

2.1 Core Package - Detailed List of Product Features

2.1.1 Campaign Management	**Applicable to Search Advertising Formats**
	
	Description: Campaign management allows advertisers to create, monitor and optimize search advertising campaigns. Users can take bulk actions such as create, pause, enable, bid or budget change for a group of campaigns / keywords / SKUs with a single click
	
	• Create campaigns with tailored ad groups, targets and SKUs. For details of ad types supported by retailer please see Section 1.2 (linked here)
	• View performance data by campaigns, targets (or keywords), search terms and SKUs where available
	• Optimize campaigns by taking following bulk or individual actions. Campaign management action can vary by retailer because of retailer limitation and / or CommerceIQ's lack of support. Please see Section 1.5 (linked here) on full scope of actions available in campaign management by retailer and ad type
	  ○ Add keywords
	  ○ Make search term negative
	  ○ Change target (keyword) bids
	  ○ Change campaign or ad group budget
	  ○ Pause, enable or archive SKUs, keywords and campaigns
	  ○ Adjust SKU or campaign bids
	  ○ Change placement modifiers and bids
	• Apply expression filters (e.g. all keywords with iROAS <$2) and take targeted bulk actions
	• Conduct bulk search by pasting groups of campaigns, SKUs, keywords directly into search
	• Create custom filtered performance views based on your business categorization, metric thresholds
	• View detailed log of all automated and user driven actions taken each day for each campaign
	• Deep dive into each campaign to view and edit all campaign parameters, limited to Amazon/Walmart/Sams Club/Instacart and referred to as the Campaigns Details Page

2.1.2 Campaign Management (DSP)	**Applicable to DSP Advertising on Amazon**
	
	Description: DSP campaign management allows advertisers to monitor and optimize display advertising campaigns. Users can take bulk actions such as pause, enable or make bid / frequency cap change for a group of orders/ line items/ products with a single click. View all or custom filtered performance data and take actions across a single or a group of orders / line items with a single click
	
	• Following actions are available in the DSP campaign management
	  ○ Order level: Frequency cap
	  ○ Line Items level: Status, Base supply bid, Max supply bid, frequency cap, add inventory, remove inventory
	  ○ Audiences Level: Add or remove audience
	• Get recommendations to improve performance by changing base / max bids, updating supply sources, audiences, line items etc.
	• Track performance of orders, line items, audience, inventory and devices
	
	Requirements for Display Activation
	
	• Requires Retail Media Display product to be purchased separately
	• Availability is based on account type; the “Seat” should be “Brand Owned” or “CIQ Owned”
	• Display for all other retailers as well as offsite Display via The Trade Desk can be supported via CommerceIQ’s managed services offering

2.1.3 AI Goal Optimizer (including Rules-based Automations, Guided Campaign Builder)	**Applicable to Search Advertising Formats**
	
	Description: CIQ's unified, AI-powered ad management system integrates bidding, budgeting, and campaign optimization (FKA Hourly Bidder, Budget Optimizer, and Campaign Optimizer)
	
	• Enable users to choose between algorithmic optimization and custom rule-based optimization to automatically adjust bids & budgets hourly or in specific time incments to maximize conversion and avoid early exhaustion of budgets
	• Upload budget plan by user defined group of campaigns or profile and portfolio and automatically spend to plan using CIQ's AI driven optimizations given any constraints that have been set up
	• Create custom strategies to automate day-to-day campaign management tasks such as bid and budget changes. Following strategies can be deployed through a custom rule builder
	  ○ Rules-based Automation: Create rules to increase bids on keywords with metrics such as ROAS, SOV, etc., exceeding user defined threshold and vice versa
	  ○ Campaign optimizer action availability can vary by retailer because of retailer limitation and / or CommerceIQ's lack of support. Please see Section 1.6 (linked here) on full scope of automations available in campaign optimizer by retailer and ad type

2.1.4 Actions Log	**Applicable to Search Advertising Formats on Amazon** **Description**: View of all automated and user driven campaign actions taken via the CIQ system • Detailed log of all campaign actions taken by campaign and budget optimizer at the most granular entity level (e.g., Campaign - Keyword), with ability to enter timeframes to help audit

2.1.5 Reporting (Search, DSP, Configurable)	**Applicable to Search on ALL Retailers and DSP Advertising on Amazon**
	
	Description: Self-service option to create customizable recurring WBR, MBR, QBR reports to measure advertising performance for both Search and DSP advertising.
	
	• Standard CommerceIQ's best practice WBR, MBR and QBR report templates with pre-selected metrics and segments (e.g., by category, campaign type, targeting type etc.)
	  ○ Aggregated performance metrics (e.g., Ad Sales, Ad Spend RoAS, CPCs) by your internal business and category taxonomy, campaign type (e.g., SP, SB, SD), targeting type (Auto, Keyword, Category, Product) etc
	  ○ Budget pacing template to track spend against budget plan
	• Ability to create custom reports from scratch
	  ○ Visualizations supported - Line chart and Multi dimension table with ability to drill down and multi time period table
	  ○ Ability to clone, delete or edit any widget
	  ○ Ability to save a report and export widgets as csv file

2.1.6 Market Insights	**Applicable to Keyword Targeted Search Advertising Formats** **Description**: Share of Voice (SoV) Measurement – Determine how your brands rank on top keywords compared to your competitors • Share of voice is defined as weighted average of placements a brand or group of products get on a select set of keywords on the first page of search results compared to competition • Track SoV of **200** keywords once a day • Keywords are auto classified into branded, generic, and competitor type and SoV is tracked for these groups • Ability to track organic, paid, and total share of voice • Ability to track Top 3, Top 5, Top 10, and Page 1 share of voice • Create custom groupings ("shelves") of priority keywords to be tracked • Dashboards to analyze SOV trends, gaps and opportunities

	• Includes retailers such as **Wayfair** & **Overstock** (competitors such as Pacvue, Skai, Flywheel **don't have** this)

2.1.7 AMC Reports	**Full Funnel Search & Display Insights on Amazon**
	
	Description: Understand your customer's shopping journey via integrated ad-attributed events across Sponsored Search and DSP
	
	• Measure which ad types are most effective at bringing shoppers into the funnel
	• Drive higher DSP ad spend efficiency - targeting based on shopping signals like multiple PDP visits, cart abandoners
	• Identify time of day with highest traffic & conversion and lowest CPCs
	• Create LTV-based audience segments for retargeting during tentpoles
	• Develop day parting strategies based on time of day performance metrics
	• Requires Retail Media Display product to be activated
	• Standard reports in-product dashboards available -
	  ○ **Exposure group overlap** - identify high performing customer cohorts based on exposure to various ad combinations
	  ○ **Full Funnel performance** - Deep dive into full funnel performance at various points of shopper journey as well as different attribution types (e.g., last touch vs. multi-touch)
	  ○ **Time of Day performance** - understand periods of the day with highest traffic, RoAS, conversions and lowest CPCs to build optimal day-parting strategies
	  ○ **Path to Purchase** - identify combination of ad formats that drive optimal path to purchase and conversion

2.2 Plus Package - Detailed List of Product Features

2.2.1 Campaign Management	**Applicable to Search Advertising Formats**
	
	Description: Campaign management allows advertisers to create, monitor and optimize search advertising campaigns. Users can take bulk actions such as create, pause, enable, bid or budget change for a group of campaigns / keywords / SKUs with a single click
	
	• Create campaigns with tailored ad groups, targets and SKUs. For details of ad types supported by retailer please see Section 1.2 (linked here)
	• View performance data by campaigns, targets (or keywords), search terms and SKUs where available
	• Optimize campaigns by taking following bulk or individual actions. Campaign management action can vary by retailer because of retailer limitation and / or CommerceIQ's lack of support. Please see Section 1.5 (linked here) on full scope of actions available in campaign management by retailer and ad type
	  ○ Add keywords
	  ○ Make search term negative
	  ○ Change target (keyword) bids
	  ○ Change campaign or ad group budget
	  ○ Pause, enable or archive SKUs, keywords and campaigns
	  ○ Adjust SKU or campaign bids
	  ○ Change placement modifiers and bids
	• Apply expression filters (e.g. all keywords with iROAS <$2) and take targeted bulk actions
	• Conduct bulk search by pasting groups of campaigns, SKUs, keywords directly into search
	• Create custom filtered performance views based on your business categorization, metric thresholds
	• View detailed log of all automated and user driven actions taken each day for each campaign
	• Deep dive into each campaign to view and edit all campaign parameters, limited to Amazon/Walmart/Sams Club/Instacart and referred to as the Campaigns Details Page

2.2.2 Campaign Management (DSP)	**Applicable to DSP Advertising on Amazon**
	
	Description: DSP campaign management allows advertisers to monitor and optimize display advertising campaigns. Users can take bulk actions such as pause, enable or make bid / frequency cap change for a group of orders/ line items/ products with a single click. View all or custom filtered performance data and take actions across a single or a group of orders / line items with a single click
	
	• Following actions are available in the DSP campaign management
	  ○ Order level: Frequency cap
	  ○ Line Items level: Status, Base supply bid, Max supply bid, frequency cap, add inventory, remove inventory
	  ○ Audiences Level: Add or remove audience
	• Get recommendations to improve performance by changing base / max bids, updating supply sources, audiences, line items etc.
	• Track performance of orders, line items, audience, inventory and devices
	
	Requirements for Display Activation
	
	• Requires Retail Media Display product to be purchased separately
	• Availability is based on account type; the “Seat” should be “Brand Owned” or “CIQ Owned”
	• Display for all other retailers as well as offsite Display via The Trade Desk can be supported via CommerceIQ’s managed services offering

2.2.3 AI Goal Optimizer (including Rules-based Automations, Guided Campaign Builder)	**Applicable to Search Advertising Formats**
	
	Description: CIQ's unified, AI-powered ad management system integrates bidding, budgeting, and campaign optimization (FKA Hourly Bidder, Budget Optimizer, and Campaign Optimizer)
	
	• Enable users to choose between algorithmic optimization and custom rule-based optimization to automatically adjust bids & budgets hourly or in specific time increments to maximize conversion and avoid early exhaustion of budgets
	• Upload budget plan by user defined group of campaigns or profile and portfolio and automatically spend to plan using CIQ's AI driven optimizations given any constraints that have been set up
	• Create custom strategies to automate day-to-day campaign management tasks such as bid and budget changes. Following strategies can be deployed through a custom rule builder
	  ○ Rules-based Automation: Create rules to increase bids on keywords with metrics such as ROAS, **iROAS**, SOV, etc., exceeding user defined threshold and vice versa
	  ○ Campaign optimizer action availability can vary by retailer because of retailer limitation and / or CommerceIQ's lack of support. Please see Section 1.6 (linked here) on full scope of automations available in campaign optimizer by retailer and ad type

2.2.4 Actions Log	**Applicable to Search Advertising Formats on Amazon** **Description**: View of all automated and user driven campaign actions taken via the CIQ system • Detailed log of all campaign actions taken by campaign and budget optimizer at the most granular entity level (e.g., Campaign - Keyword), with ability to enter timeframes to help audit

2.2.5 Reporting (Search, DSP, Configurable)	**Applicable to Search on ALL Retailers and DSP Advertising on Amazon**
	
	Description: Self-service option to create customizable recurring WBR, MBR, QBR reports to measure advertising performance for both Search and DSP advertising.
	
	• Standard CommerceIQ's best practice WBR, MBR and QBR report templates with pre-selected metrics and segments (e.g., by category, campaign type, targeting type etc.)
	  ○ Aggregated performance metrics (e.g., Ad Sales, Ad Spend RoAS, CPCs) by your internal business and category taxonomy, campaign type (e.g., SP, SB, SD), targeting type (Auto, Keyword, Category, Product) etc
	  ○ Budget pacing template to track spend against budget plan
	• Ability to create custom reports from scratch
	  ○ Visualizations supported - Line chart and Multi dimension table with ability to drill down and multi time period table
	  ○ Ability to clone, delete or edit any widget
	  ○ Ability to save a report and export widgets as csv file

2.2.6 Market Insights	**Applicable to Keyword Targeted Search Advertising Formats** **Description**: Share of Voice (SoV) Measurement – Determine how your brands rank on top keywords compared to your competitors • Share of voice is defined as weighted average of placements a brand or group of products get on a select set of keywords on the first page of search results compared to competition • Track SoV of **500** keywords once a day ○ **Add on Allowed ($) - Up to 2,500 keywords** once a day, intra-day tracking (6x a day) for up to 50 top priority keywords • Keywords are auto classified into branded, generic, and competitor type and SoV is tracked for these groups • Ability to track organic, paid, and total share of voice • Ability to track Top 3, Top 5, Top 10, and Page 1 share of voice • Create custom groupings ("shelves") of priority keywords to be tracked

	• Dashboards to analyze SOV trends, gaps and opportunities • Includes retailers such as **Wayfair** & **Overstock** (competitors such as Pacvue, Skai, Flywheel **don't have** this)

2.2.7 AMC Reports	**Full Funnel Search & Display Insights on Amazon**
	
	Description: Understand your customer's shopping journey via integrated ad-attributed events across Sponsored Search and DSP
	
	• Measure which ad types are most effective at bringing shoppers into the funnel
	• Drive higher DSP ad spend efficiency - targeting based on shopping signals like multiple PDP visits, cart abandoners
	• Identify time of day with highest traffic & conversion and lowest CPCs
	• Create LTV-based audience segments for retargeting during tentpoles
	• Develop day parting strategies based on time of day performance metrics
	• Requires Retail Media Display product to be activated
	• Standard reports in-product dashboards available -
	  ○ **Exposure group overlap** - identify high performing customer cohorts based on exposure to various ad combinations
	  ○ **Full Funnel performance** - Deep dive into full funnel performance at various points of shopper journey as well as different attribution types (e.g., last touch vs. multi-touch)
	  ○ **Time of Day performance** - understand periods of the day with highest traffic, RoAS, conversions and

	lowest CPCs to build optimal day-parting strategies ○ **Path to Purchase** - identify combination of ad formats that drive optimal path to purchase and conversion
2.2.8 AMC+ Insights	**Full Funnel Search & Display Insights on Amazon** **Description**: Monthly reports package on understanding customer's shopper journey AMC+ includes the following reports (**limit 5** from the below list): ○ Path to Purchase (additional ad types) ○ Exposure Group (additional ad types) ○ Campaign Purchase Rate Overlap ○ Frequency Reach Analysis ○ Time to Conversion ○ NTB Gateway ASINs ○ Cross Sell / ASIN Overlap ○ Search Term Summary
2.2.9 Incrementality	**Applicable to Search Advertising Formats** **Description**: CIQ's proprietary AI model that estimates true ROI of search media investment and optimizes spend to drive incremental sales (and not just ad attributed sales) for brands • Estimated at a keyword level and can be rolled up to campaigns or group of campaigns • Requires availability of Market Insights and retailer keyword level performance data in order to enable • Includes following metrics - ○ Incremental ROAS (iROAS): Measures true incremental ROI for given advertising spend ○ Incremental Sales: Estimated incremental sales for given advertising spend • Incrementality measures are available in reporting, campaign management and campaign optimizer modules • Ability to write rule based strategies to increase Incremental ROAS in campaign optimizer. Set up rules to automatically increase bids on keywords with high incrementality while reducing bids on keywords driving low incrementality

2.2.10 Reporting (Incrementality, Cross-Retailer)	**Applicable to Search on ALL Retailers and DSP Advertising on Amazon**
	
	Description: Self-service option to create customizable recurring WBR, MBR, QBR reports to measure incrementality / iROAS and cross-retailer performance for both Search and DSP advertising.
	
	• Incrementality Reporting
	  ○ Aggregated iROAS / incremental sales metrics by your internal business and category taxonomy, campaign type (e.g., SP, SB, SD), targeting type (Auto, Keyword, Category, Product) etc.
	  ○ Model uses 50+ signals on factors such as share of voice, brand affinity, and propensity to buy
	• Cross-Retailer Reporting
	  ○ Ability to see performance metrics across all retailers in one view

2.2.11 Ally[AI] Media Teammate
I: Included
II: Add On - ($)
	Applicable to Search on Amazon, Walmart, Target, and more
	
	Description: Generative **AI**-based Teammate agents to quickly summarize and provide insights, recommendations and optimization of advertising performance.
	
	• **Teammate I (FKA Nexis)**
	  ○ Leverages CommerceIQ's Ecommerce Context Engine to power insights, automatically highlighting outliers
	  ○ Automatically generate **1-click powerpoint presentations**, with custom configured views, titles and GenAI-based Insights
	• **Teammate II Add On Allowed ($)** - everything in Teammate I and more:
	  ○ Automates iROAS analysis, provides **automated bid and budget actions** to achieve mentioned goals
	  ○ **Uses proprietary neural network model of 50+ digital signals to automatically adjust bids by campaign and keyword daily** by leveraging goal value, budget pacing information, budget plan, and a variety of factors (number of impressions, click thru rates, SOV, inventory metrics, incremental fraction and sales data, etc.).

2.2.12 Programmatic Data Sharing (Add On, $)	**Applicable to Search Advertising Formats** **Description:** Frictionless data-sharing solution, enabling clients to pull their retail media performance data directly into their own data warehouses or data lakes via Databricks connectors. This capability allows for deeper analytics and custom reporting within a client's existing data infrastructure.

2.3 Performance Package - Detailed List of Product Features

2.3.1 Campaign Management	**Applicable to Search Advertising Formats**
	
	Description: Campaign management allows advertisers to create, monitor and optimize search advertising campaigns. Users can take bulk actions such as create, pause, enable, bid or budget change for a group of campaigns / keywords / SKUs with a single click
	
	• Create campaigns with tailored ad groups, targets and SKUs. For details of ad types supported by retailer please see Section 1.2 (linked here)
	• View performance data by campaigns, targets (or keywords), search terms and SKUs where available
	• Optimize campaigns by taking following bulk or individual actions. Campaign management action can vary by retailer because of retailer limitation and / or CommerceIQ's lack of support. Please see Section 1.5 (linked here) on full scope of actions available in campaign management by retailer and ad type
	  ○ Add keywords
	  ○ Make search term negative
	  ○ Change target (keyword) bids
	  ○ Change campaign or ad group budget
	  ○ Pause, enable or archive SKUs, keywords and campaigns
	  ○ Adjust SKU or campaign bids
	  ○ Change placement modifiers and bids
	• Apply expression filters (e.g. all keywords with iROAS <$2) and take targeted bulk actions
	• Conduct bulk search by pasting groups of campaigns, SKUs, keywords directly into search
	• Create custom filtered performance views based on your business categorization, metric thresholds
	• View detailed log of all automated and user driven actions taken each day for each campaign

	• Deep dive into each campaign to view and edit all campaign parameters, limited to Amazon/Walmart/Sams Club/Instacart and referred to as the Campaigns Details Page

2.3.2 Campaign Management (DSP)	**Applicable to DSP Advertising on Amazon**
	
	Description: DSP campaign management allows advertisers to monitor and optimize display advertising campaigns. Users can take bulk actions such as pause, enable or make bid / frequency cap change for a group of orders/ line items/ products with a single click. View all or custom filtered performance data and take actions across a single or a group of orders / line items with a single click
	
	• Following actions are available in the DSP campaign management
	  ○ Order level: Frequency cap
	  ○ Line Items level: Status, Base supply bid, Max supply bid, frequency cap, add inventory, remove inventory
	  ○ Audiences Level: Add or remove audience
	• Get recommendations to improve performance by changing base / max bids, updating supply sources, audiences, line items etc.
	• Track performance of orders, line items, audience, inventory and devices
	
	Requirements for Display Activation
	
	• Requires Retail Media Display product to be purchased separately

	• Availability is based on account type; the “Seat” should be “Brand Owned” or “CIQ Owned” • Display for all other retailers as well as offsite Display via The Trade Desk can be supported via CommerceIQ’s managed services offering

2.3.3 AI Goal Optimizer (including Rules-based Automations, Guided Campaign Builder)	**Applicable to Search Advertising Formats**
	
	Description: CIQ’s unified, AI-powered ad management system integrates bidding, budgeting, and campaign optimization (FKA Hourly Bidder, Budget Optimizer, and Campaign Optimizer)
	
	• Enable users to choose between algorithmic optimization and custom rule-based optimization to automatically adjust bids & budgets hourly or in specific time increments to maximize conversion and avoid early exhaustion of budgets
	• Upload budget plan by user defined group of campaigns or profile and portfolio and automatically spend to plan using CIQ’s AI driven optimizations given any constraints that have been set up
	• Create custom strategies to automate day-to-day campaign management tasks such as bid and budget changes. Following strategies can be deployed through a custom rule builder
	  ○ Rules-based Automation: Create rules to increase bids on keywords with metrics such as ROAS, **iROAS**, SOV, etc., exceeding user defined threshold and vice versa
	  ○ Campaign optimizer action availability can vary by retailer because of retailer limitation and / or CommerceIQ’s lack of support. Please see Section 1.6 (linked here) on full scope of automations

	available in campaign optimizer by retailer and ad type
2.3.4 Actions Log	**Applicable to Search Advertising Formats on Amazon** **Description**: View of all automated and user driven campaign actions taken via the CIQ system • Detailed log of all campaign actions taken by campaign and budget optimizer at the most granular entity level (e.g., Campaign - Keyword), with ability to enter timeframes to help audit

2.3.5 Reporting (Search, DSP, Configurable)	**Applicable to Search on ALL Retailers and DSP Advertising on Amazon**
	
	Description: Self-service option to create customizable recurring WBR, MBR, QBR reports to measure advertising performance for both Search and DSP advertising.
	
	• Standard CommerceIQ's best practice WBR, MBR and QBR report templates with pre-selected metrics and segments (e.g., by category, campaign type, targeting type etc.)
	  ○ Aggregated performance metrics (e.g., Ad Sales, Ad Spend RoAS, CPCs) by your internal business and category taxonomy, campaign type (e.g., SP, SB, SD), targeting type (Auto, Keyword, Category, Product) etc
	  ○ Budget pacing template to track spend against budget plan
	• Ability to create custom reports from scratch
	  ○ Visualizations supported - Line chart and Multi dimension table with ability to drill down and multi time period table
	  ○ Ability to clone, delete or edit any widget
	  ○ Ability to save a report and export widgets as csv file

2.3.6 Market Insights	**Applicable to Keyword Targeted Search Advertising Formats** **Description**: Share of Voice (SoV) Measurement – Determine how your brands rank on top keywords compared to your competitors • Share of voice is defined as weighted average of placements a brand or group of products get on a select set of keywords on the first page of search results compared to competition • Track SoV of **up to 2,500 keywords** once a day, intra-day tracking (6x a day) for up to 50 top priority keywords • Keywords are auto classified into branded, generic, and competitor type and SoV is tracked for these groups • Ability to track organic, paid, and total share of voice • Ability to track Top 3, Top 5, Top 10, and Page 1 share of voice • Create custom groupings ("shelves") of priority keywords to be tracked • Dashboards to analyze SOV trends, gaps and opportunities

	• Includes retailers such as **Wayfair** & **Overstock** (competitors such as Pacvue, Skai, Flywheel **don't have** this)

2.3.7 AMC Reports	**Full Funnel Search & Display Insights on Amazon**
	
	Description: Understand your customer's shopping journey via integrated ad-attributed events across Sponsored Search and DSP
	
	• Measure which ad types are most effective at bringing shoppers into the funnel
	• Drive higher DSP ad spend efficiency - targeting based on shopping signals like multiple PDP visits, cart abandoners
	• Identify time of day with highest traffic & conversion and lowest CPCs
	• Create LTV-based audience segments for retargeting during tentpoles
	• Develop day parting strategies based on time of day performance metrics
	• Requires Retail Media Display product to be activated
	• Standard reports in-product dashboards available -
	  ○ **Exposure group overlap** - identify high performing customer cohorts based on exposure to various ad combinations
	  ○ **Full Funnel performance** - Deep dive into full funnel performance at various points of shopper journey as well as different attribution types (e.g., last touch vs. multi-touch)
	  ○ **Time of Day performance** - understand periods of the day with highest traffic, RoAS, conversions and

	lowest CPCs to build optimal day-parting strategies ○ **Path to Purchase** - identify combination of ad formats that drive optimal path to purchase and conversion
2.3.8 AMC+ Insights	**Full Funnel Search & Display Insights on Amazon** **Description**: Monthly reports package on understanding customer's shopper journey AMC+ includes the following reports (**limit 5** from the below list): ○ Path to Purchase (additional ad types) ○ Exposure Group (additional ad types) ○ Campaign Purchase Rate Overlap ○ Frequency Reach Analysis ○ Time to Conversion ○ NTB Gateway ASINs ○ Cross Sell / ASIN Overlap ○ Search Term Summary
2.3.9 Incrementality	**Applicable to Search Advertising Formats** **Description**: CIQ's proprietary AI model that estimates true ROI of search media investment and optimizes spend to drive incremental sales (and not just ad attributed sales) for brands • Estimated at a keyword level and can be rolled up to campaigns or group of campaigns • Requires availability of Market Insights and retailer keyword level performance data in order to enable • Includes following metrics - ○ Incremental ROAS (iROAS): Measures true incremental ROI for given advertising spend ○ Incremental Sales: Estimated incremental sales for given advertising spend • Incrementality measures are available in reporting, campaign management and campaign optimizer modules • Ability to write rule based strategies to increase Incremental ROAS in campaign optimizer. Set up rules to automatically increase bids on keywords with high incrementality while reducing bids on keywords driving low incrementality

2.3.10 Reporting (Incrementality, Cross-Retailer)	**Applicable to Search on ALL Retailers and DSP Advertising on Amazon**
	
	Description: Self-service option to create customizable recurring WBR, MBR, QBR reports to measure incrementality / iROAS and cross-retailer performance for both Search and DSP advertising.
	
	• Incrementality Reporting
	  ○ Aggregated iROAS / incremental sales metrics by your internal business and category taxonomy, campaign type (e.g., SP, SB, SD), targeting type (Auto, Keyword, Category, Product) etc.
	  ○ Model uses 50+ signals on factors such as share of voice, brand affinity, and propensity to buy
	• Cross-Retailer Reporting
	  ○ Ability to see performance metrics across all retailers in one view

2.3.11 Ally[AI] Media Teammate I & II	**Applicable to Search on Amazon, Walmart, Target, and more**
	
	Description: Generative **AI**-based Teammate agents to quickly summarize and provide insights, recommendations and optimization of advertising performance.
	
	• **Teammate I (FKA Nexis)**
	  ○ Leverages CommerceIQ's Ecommerce Context Engine to power insights, automatically highlighting outliers
	  ○ Automatically generate **1-click powerpoint presentations**, with custom configured views, titles and GenAI-based Insights
	• **Teammate II** - everything in Teammate I and more:
	  ○ Automates iROAS analysis, provides **automated bid and budget actions** to achieve mentioned goals
	  ○ **Uses proprietary neural network model of 50+ digital signals to automatically adjust bids by campaign and keyword daily** by leveraging goal value, budget pacing information, budget plan, and a variety of factors (number of impressions, click thru rates, SOV, inventory metrics, incremental fraction and sales data, etc.).

2.3.12 Programmatic Data Sharing	**Applicable to Search Advertising Formats**

	Description: Frictionless data-sharing solution, enabling clients to pull their retail media performance data directly into their own data warehouses or data lakes via Databricks connectors. This capability allows for deeper analytics and custom reporting within a client's existing data infrastructure.
2.3.13 Single Sign-On	**Applicable to Search Advertising Formats** **Description:** Authentication process that allows users to access multiple applications or systems by logging in once with a single set of credentials. This capability allows for more frictionless access within a client's existing systems infrastructure.

3. Product FAQ

This document provides answers to frequently asked questions about the Retail Media Management Product, including questions around AI Goal Optimizer, incrementality model, and more.

CommerceIQ

Intelligent automation for profitable ecommerce growth

1. Digital Shelf Optimization Scope

CommerceIQ Digital Shelf Optimization product collects publicly available information from over 1000 retailer websites to analyze product detail page (pdp) content, search results, availability, pricing, promotions, ratings & reviews. The product then reviews this data to score products against benchmarks and creates scorecards with recommended action items to improve the scores. Details of the DSO standard offering are outlined in **Section 1.1** (Linked here)

1.1 Digital Shelf Optimization Analytics Type

CommerceIQ Digital Shelf Optimization analytics are categorized into two primary buckets based on the retailer store type. Single Store analytics is based on the data gathered from (i) online only retailers such as Amazon, (ii) store agnostic website for retailers that support such a functionality, and (iii) websites with a representative store location. Multi-Store analytics is based on the data gathered from retailer websites by entering a specific store location to gather store specific data points.

1.2 List of Retailers Supported

CommerceIQ Digital Shelf Optimization includes support for the retailers and countries set forth in **Section 1.2** (linked here). The support is broken down by Single Store and Multi Store. The Syndicated Retailers are tested and the availability is verified at the time of syndication. Any retailers not on the list are subject to the syndication test. The list of retailers supported is subject to change at any time due to changes on the retailer site and at CommerceIQ's discretion. Some retailers on the list may become unavailable due to retailers blocking web traffic coming from us. CommerceIQ has a dedicated team of engineers specializing in resolving such issues and we address these issues on a priority level. Nonetheless, an occasional retailer blocking is an unavoidable part of scraping the publicly available information.

1.3 Feature Availability by Store Gather Type

CommerceIQ Digital Shelf Optimization offers a comprehensive set of features; however, availability may differ across retailers and regions due to inherent retailer constraints or CommerceIQ's own development priorities and timelines. Some features may become temporarily unavailable due to events outside of the reasonable control of CommerceIQ, including (i) Covered Retailer Site, API, or other Retailer system limitations or outages (including respect for retailer max load restrictions), (ii) changes to Retailer Sites or Retailer Site mechanisms or tools that require changes to CommerceIQ's tools to continue the collection of Shelf Data (provided that CommerceIQ promptly commences assessment and implementation of such changes), (iii) issues associated with ISPs, cloud providers, or Customer's systems, (iv) Retailer Site latency that exceeds industry, and (v) the absence of a Shelf Data Point (or SKU) from the relevant Covered Retailer Site (e.g., product has been delisted, price was not provided on the relevant Retailer Site, no ratings and reviews exist, etc.).

2. Detailed List of Single Store Product Features

As part of the Digital Shelf Optimization product subscription, CIQ provides Standard Coverage for the selected retailers and categories. This coverage includes the following features and data points This coverage and features are contingent on retailers not restricting CIQ's ability to collect data from their website. The data points powering these features are gathered on a daily basis, unless otherwise specified. The metrics are available at the SKU level granularity unless otherwise specified and can be aggregated at a brand, manufacturer, category, retailer, and country level.

2.1 Product Content	**Description**: Product Content module tracks detail page information and data, such as text description, images, and videos, used to describe a product on a retailer and create a unified product content score. There are three main features a. Product content data b. Content compliance validation c. Validation against PIM / gold standard data. There are multiple reports to assess your content performance 1. **Dashboard** - Provides a high-level summary overview based on product basics, product compliance, advanced content modules highlighting the failures of content compliance 2. **Product Basics** - Tests and reports on what has been shown on product detail pages of a retailer vs. what's expected. The following aspects of content are extracted and evaluated in this report o Product title o Product Image o Product description o Product pricing 3. **Product Compliance** - Tests and reports on the following aspect of content, when available by retailer, providing individual test scores and an aggregated score based on metric weights. o Product Title o Ingredients o Instructions o Storage o Net quantity o Manufacturer o Allergens

	○ Nutrition 4. **Advanced Content** - Provides details of the presence of advanced contents on the product detail page(pdp) at the SKU level per retailer. The following aspect of the pdp is reported in the advanced content- ○ Image count ○ Video ○ Keywords ○ Subscription ○ Frequency ○ Bullet point count 5. **Gold Standard Features** - Tests and reports on the bullet point/description compliance of a product when compared to the PIM data. 6. **Product Benefit Tracker** - Tests and reports on the presence of specific keywords relevant for the brand and sub brands in the product description, grouped by retailer and brand 7. **Content Management** - Provides a unified view of compliance for product titles, images, and descriptions, with an aggregated content score across retailers, which can be broken down by retailer, brand, and metric. The "Spotlight" section highlights SKUs that fall below target thresholds and require attention
2.2 Availability	**Description**: Assess product availability for purchase and provides a summary of the pricing ranges across retailers There are two modules under Availability section 1. **Price range** - Provides a summary of all your products grouping them at defined price ranges across retailers. It also shows the % of products under promotions. This dashboard shows pricing based on single location data only 2. **Availability-** Provides a summary of products that are available to buy on a retailer website along with the number of products currently out of stock and delisted for the given time period. The data is grouped by retailer.
2.3 Pricing	**Description**: This module provides insights into how your products are priced across various retailers, along with alerts for any price changes. • **Pricing Summary**: Offers a snapshot of product pricing across retailers, organized by product ID and retailer ID.

	• **Pricing Architecture**: Provides a daily summary of products where smaller packs have better deals compared to larger packs, grouped by SKUs across retailers.
	• **Pricing Alerts**: Notifies you of price changes and updates on promotions across retailers.
	• **Pricing Trends**: Tracks and reports on product price changes over time across different retailers.
	• **IMAP**: Monitors product pricing of key products against internet minimum advertised pricing and tracks any pricing violations.
	  ○ Requires PIM connection from client to get the IMAP
	  ○ Available for US market only

2.4 Promotions	**Description**: Promotions module monitors and tracks product promotions and provides an overview at a product, brand and assortment level,
	
	1. **Promotional Calendars** - Gives you a calendar view of multiple promotions being run at a SKU level.
	2. **Banner**: Provides weekly insights into paid placement and site advertising for a retailer.
	  ○ Banners are captured from the Home page, Category shelf pages and Search pages of a retailer
	  ○ Reports are grouped and generated at brand and retailer level
	
	Frequency: Gathered daily for client and competitor brands and reported weekly
	
	Retailer availability:
	Banners - All retailers where banner feasibility is specifically verified and where CIQ is able to collect data from retailer websites. Not available for any Amazon retailers. Please see Section 1.4 on scope of coverage for banners.

2.5 Ratings & Reviews	**Description**: The Ratings & Reviews module tracks customer sentiment by monitoring the latest product reviews and ratings, and it aggregates new reviews over time to help inform strategy. 1. **Dashboard -** Provides an overview of user sentiment across manufacturers, retailers, categories, and assortment groups. 2. **By Retailer**: Summarizes a brand's average rating by retailer, including the percentage of users who would recommend the product and the distribution of star ratings. 3. **By Product**: Displays each product's rating along with written reviews, helping to identify potential issues, duplicate reviews, and other opportunities. 4. **Rating Trend**: Tracks changes in customer sentiment over time, showing the average user rating per brand within specific time periods.

2.6 Search	**Description**: Analyzes product presence on search results pages by brand and category, focusing on metrics from the first page of search results. As a part of core offering, clients have the ability to track up to 100 search terms for every category they subscribe to. 1. **Dashboard**: Provides a summary and trend of share of search for client brands and competitor brands across retailers. The dashboard also provides a breakdown of share of search by keywords/search terms for each retailer. 2. **Share of Search by Brand**: This dashboard provides a share of search score for each brand tracked against each search term. The report is grouped by retailer and has an option to switch to the weighted share of search score per search term. 3. **Share of Shelf**: Provides a summary and trend of share of category for client brands and competitor brands across retailers. The dashboard also provides a breakdown of metric by category shelves for each retailer. 4. **Comparison by Retailer**: Provides comparison of the search ranking for a keyword across retailers. It displays the product placements and identifies the sponsored/organic placement of the products. 5. **Comparison by Search Term**: Provides comparison of product placements at a retailer for selected search terms 6. **Weighted Share of Voice:** Provides the positional weighted share of voice score per search term for brands across retailers 7. **Search Rank Trends**: Provides the trend of the average rank of client and competitor products appearing for a search term by retailer. The Average rank is calculated by averaging the ranks of all the client products appearing on the search page of a retailer for a given search term. 8. **Top 5 Products**: Provides a trend of share of search in top 5 positions for the client product and competitor product on a retailer for a selected search term **Granularity :** Search term, brand, category and retailer level

3. Detailed List of Multi-Store Product Features

Multi-Location Analytics, also called Location-Based Analytics offers detailed insights at an individual store location level. The coverage and features outlined below are applicable only to the retailers where multi-store coverage is available, as outlined in section 1.1. The availability is also contingent on retailers not restricting CIQ's ability to collect store level data from their website. The multi-store coverage and features mainly focus on the client's own brands. We may include competitor brands in limited cases, subject to prior approval from the Product team.

Frequency: The data points powering these features are gathered once a week for branded skus, unless otherwise specified from all syndicated retailers where CIQ is able to collect store level data from retailer websites.
The frequency can be increased to up to 2x/week for certain retailers depending on the total crawl

load (at CIQ's discretion). For a limited number of stores per retailer, the frequency can be increased to 1x/day. Retailers and stores list for daily crawls will be dynamic and managed by the CIQ product team.

3.1 Assortment	**Description**: Provides insights into the Assortment Compliance and Share of Portfolio at each of the retailers as an average across sample of stores • Provides users with an overview of Key competitors' portfolios, allowing to compare client's own and competitors' share of portfolio in each location. • The 'Spotlights' section provides insights into which retailer/stores are the biggest drivers for compliance or non-compliance of the assortment
3.2 Availability	**Description -** Provides the availability of the products across the selected stores for the retailer along with a competitor benchmark. • Provides a breakdown of product that are available, out of stock and delisted, aggregated across stores for a retailer • Analysis and availability breakdown by retailer and category level with specific recommendations to improve the metric score. • Spotlights for focussed view on the drivers of the availability changes and recommendations on key actions at category, brand, retailer, store etc. levels.
3.3 Pricing	**Description**: Provides an insight into pricing variations across different stores and retailers for a product. • Multi-location pricing is only available via Datalake today.
3.4 Promotions	**Description**: Provides details of the percentage of your assortment on promotion across various stores and retailers, along with a benchmark comparison against key competitors. • Highlight the percentage of your assortment on promotion across stores and retailers. • Includes a benchmark comparison with key competitors. • Provides a comparison of promotional percentages between your products and competitors' at each retailer. • The "Spotlight" section identifies areas where there is over-promotion or under-promotion broken down at retailer and the store level.

3.5 Modalities	**Description**: This service offers insights into product availability across various fulfillment methods—including pickup, delivery, and shipping—at four major U.S. retailers: Walmart, Target, Kroger, and Sam's Club. The service provides: • A daily summary of product availability for each fulfillment method across stores and retailers. • A breakdown of fulfillment modalities by retailer and store. • A "Spotlight" section that highlights insights on which retailers have a balanced mix of fulfillment modalities and which retailers or stores require improvement. • Insights at the retailer level for each modality type, offering a detailed perspective on product availability **Retailer availability**: This module is currently available for Walmart-US, Target-US, Kroger-US, and Sam'sClub-US

4. Scorecards

The Single-Store and Multi-Store features are reported using scorecards. The scorecards are updated with the latest data on a daily basis and the data is locked in on a monthly basis to maintain consistency. These scorecards provide a unified view into individual feature scores and help track progress against the goals set. Here are the details of various Scorecards available.

4.1 Standard Scorecard	**Market / Country level Standard Scorecard** **Description**: The Scorecard provides an aggregated view of digital shelf metrics—Content, Availability, Reviews, and Search—against thresholds to generate an overall digital shelf health score. Metrics are further broken down by Retailer, Brand, and Category, and individual key metrics are available for a more granular view. Available options in scorecards: • **Standard Metrics**: Includes a predefined set of metrics to assess digital shelf health performance across retailers. • **Customizable Metrics**: Offers the flexibility to select and adjust metrics according to specific client requirements for digital shelf health measurement. • **Customizable Weightages:** Scorecard offers standard weights out of the box for all the clients based on their brand performances, but the client can choose to bring their own weights to override the standard one on request.

	• **Customizable Thresholds**: Provides flexibility to clients to set their own thresholds and targets for tracking progress against digital shelf health goals. • **Metric Renaming**: Enables clients to rename metrics to align with their internal naming conventions.
4.2 Global Scorecard	**Global Scorecard to provide a global view of an account** **Description**: The Global Scorecard offers a comprehensive view of digital shelf health for client brands across various geographies. It aggregates data from individual markets to provide a unified score for a brand, spanning categories and selected metrics. • **Regional and Market level Breakdown**: Displays digital shelf health at regional and market levels, offering insights into specific geographical performance. • **Customization**: Allows selection and customization of metrics and threshold different than the individual market scorecards to facilitate global benchmarking • **Trend Analysis**: Shows trends in overall scores to compare your brand's performance over time.
4.3 Competitor Scorecard	**Competitor Scorecard to provide an overview and side-by-side comparison against key competitor brands** **Description**: The Competitor Scorecard offers a comparative view of digital shelf health scores against key competitors, grouped by retailer, brand, and category with a breakdown by individual metrics. • **Competitor Tracking**: Includes scores for five key competitor manufacturers and their brands for comprehensive market analysis. • **Standard Metrics**: Uses a set of standardized metrics to consistently track performance across competitors. • **Side-by-Side Comparison**: Provides a direct comparison of all metrics between your brand and competitors, facilitating easy benchmarking. • **Grouped Scores**: Organizes scores by retailer, manufacturer, brand, and category for detailed insights at each level. • **Trend Analysis**: Shows trends in overall scores to compare your brand's performance over time relative to competitors.
4.4 Data Quality Dashboard	**Data Transparency Report to provide full visibility into the DSA data** **Description**: Provides visibility in the success of the data collection process and monitors the completeness and stability of data across various retailers. There are multiple metrics available for tracking the quality of data

	• **Total Average Score**: Provides an overall quality % based on the Store,Search and Assortment metrics for each week • **Store Completeness (for LBA)**: Provides the maximum % coverage of stores across retailers in a week for LBA collection. • **Store Stability:** Provides an average success rate of data collection from retailer stores over the week • **Search Completeness**: Provides the maximum coverage of search terms across retailers for the week • **Search Stability**: Provides an average success rate of search pages for the specified keywords from retailer over the week • **Assortment Completeness**: Provides the maximum coverage of assortments across retailer stores for the week • **Assortment Stability**: Provides an average success rate of assortment coverage across retailer stores for the week

More details on the scorecard and metrics can be found here

5. Add-Ons

Digital Shelf Optimization product offers multiple add-ons to allow clients to customize the product when they sign up for respective add-ons.

5.1 Custom Categories	**Description**: Customers have an option to use their own custom categorization system and naming for all Digital Shelf Optimization product features. The custom categorization needs to be configured and implemented during the onboarding process. The option to customize categories is unavailable once the onboarding begins. Category renaming can be done at any point. Here's how custom categorization works: 1. **Purpose:** This system allows customers to view insights about their (and competitor) products sold online using categories that align with their business structure, while still working within CIQ's standardized category framework. 2. **Category Selection**: Customers first choose their subscription scope from CommerceIQ standard categories. This selection determines which products they can access in the tool. 3. **Recategorization Process**: (i) Customers can provide rules to sort products from their subscribed CIQ categories into their custom categories. (ii) These rules only apply to products within the CIQ categories the customer has paid for. (iii) The recategorization rules must be MECE (mutually exclusive and collectively exhaustive). 4. **Limitations:** The custom categorization cannot add products from CIQ categories the customer hasn't subscribed to. If any products

	types desired by customers are missing, they must first subscribe to those categories
5.2 Additional Search Terms	If clients need to track more than the default number of search terms, they can use this add-on to increase their search terms coverage. Each unit of the add-on gives clients the ability to add up to 100 search terms for one retailer. So if a client wants to track 200 additional search terms on 5 retailer websites, they will select 2*5 = 10 units of this add-on.
5.3 Additional Competitor Brand Coverage	If clients need to track more than the default number of competitor brands as described in section, they can use this add-on to increase their competitor brand coverage. Each unit of the add-on gives clients the ability to add up to 5 competitors.
5.4 Full category Coverage	If a client wants to track all skus in a category irrespective of their brand, age, or the seller type (1P/3P), they can select this add-on and specify retailers and categories.
5.5 Custom Scorecards	CIQ offers a standard set of KPIs as part of standard offerings. If a client wants to create a custom metric or assign custom weights and targets to the metrics in scorecards, they can
5.6 Location Based Analytics	Location-based Analytics (LBA) is a separate module of the Digital Shelf Optimization product. Clients need to subscribe to this module in order to access the features outlined in section 3. Clients opting into LBA need to select the retailers they want to track at a store level (Retailer list provided section 1.1) and the number of stores they want to track in increments of 100.
5.7 PIM Support (3P PIM)	This module allows clients to connect and sync product Gold Standard data from their PIM provider with CommerceIQ. Each unit of this add-on gives clients the ability to connect one PIM provider in one country. So if a client wants to connect their PIMs in 5 countries with CommerceIQ, they will select 5 units of this add-on.
5.8 Procat	Clients who do not have a PIM solution can subscribe to CommerceIQ's in-house tool, "Procat", for setting a gold standard catalog.

	Features available: 1. Expanded Data Support: GSN, GSI, Bullet Points, Secondary Images, Title Keywords, IMAP 2. Flexible Product Identification: Products can now be identified by GTIN or RPC 3. Retailer-specific content management a. Navigate and modify product content b. Add Retailer Content manually or bulk change 4. Advanced CSV Import with validations 5. Bulk Image Upload: Ability to upload multiple images per sku and retailer. Image mapping to appropriate sku and retailer is achieved using the image name. 6. Content Export:
5.9 Data Lake Exports	The Datalake is a data-sharing service that offers clients access to their digital shelf data in raw form through database tables. The following data sets are accessible via Datalake: • Product Availability (Single-location and Multi-location) • Product Compliance • Product Ratings and Reviews • Search Rankings • Promotions (Single-location and Multi-location) • Pricing (Single-location and Multi-location) • Scorecard Data Clients can connect to this data source through one of the following options: 1. Google BigQuery Direct Access: Data is directly copied into client's Google BigQuery, updated daily. 2. Snowflake to Snowflake Data Share: Provides direct and private sharing options, updated daily. 3. Data Export: Data is exported to object stores in formats such as CSV or JSON, with updates available once a week.
5.10 iMAP Tracking	CommerceIQ can monitor products on retailer websites multiple times per day to track their price and monitor it against the MAP price provided by clients through PIM. Clients can select this add-on to enable this functionality. Each unit of the add-on allows clients to track up to 100 skus on one retailer.

Appendix

1. Product Coverage based on CIQ Standard Taxonomy

CommerceIQ Digital Shelf Optimization utilizes web scraping of retailer websites to discover products on retailer's digital shelf. This scraped information is then processed, categorized and analyzed to generate insights. Digital Shelf Optimization uses CommerceIQ Standard Taxonomy to categorize all products and is set forth in Section 1.2 (linked here). This taxonomy governs the product coverage available for each category. CommerceIQ uses its proprietary machine learning algorithm to classify discovered products into appropriate categories. Each product will have a single category associated with it. If you believe your product category isn't present in our standard taxonomy please ask us and we'll add it in.

2. Category Coverage

CommerIQ Digital Shelf Optimization provides a comprehensive category coverage across all supported retailers. We achieve and maintain this coverage using a number of methods to identify and categorize products. This includes category scans, search term scans and direct product page scans. Category scans constitute identifying all category nodes and regularly scanning category pages of all nodes to monitor listed products. The number of nodes for categories will vary by category and retailer. For nodes with a large number of pages, CommerceIQ will scan up to 50 pages per node. Search term scans consist of scanning the first page of 'key category search terms' as defined by CommerceIQ. These scans enable CommerceIQ to discover products and provide comprehensive category coverage. Out of these discovered products, CommerceIQ will identify relevant products and tag them with appropriate brand, category tags. A product's relevance is determined by CommerceIq based on various criteria including product's brand name, its search ranking against key search terms, sales rank, client subscriptions etc. Tagged products belonging to key brands are selected for regular product detail page (pdp) crawls, also known as deep crawls. The frequency of deep crawls may vary for different products and is determined by CommerceIQ. To ensure thorough coverage of client branded products in categories with a large number of pages per node, CommerceIQ may use various mechanisms such as applying brand filters to discover and tag desired products efficiently.
